

STAR PROGRAMME 2022

All meetings at 2-00pm in the Keyworth Methodist Church

Monday 3rd January 2022:

Paul Roebuck – One of our own long-established STAR Group Members will be giving a talk called...

"The time has come ..."

Abstract.

This an undemanding scientific talk based on the calendar. The talk starts with the philosophical question 'What is Time', which is unanswerable. But how we divide it up has a long history, which is the main topic of the talk. We know how it is divided up today and we explore the development from Ancient Civilisations through to the 21st Century.

Monday 7th February 2022:

Dr Fran Ebling will be giving a talk with the title **"Biological Clocks"**

Abstract

This talk will consider how our internal daily body clocks influence almost every aspect of our lives, and then consider "chrononutrition", the emerging science of how the timing of when we eat influences our metabolic health.

Monday 7th March 2022:

Julian Ellis (Master Framework Knitter) will be giving a talk with the title **"Tomorrows Textiles".**

Abstract

Julian will be talking about textiles for technical applications, including surgical implants, and parts for aeroplanes, ships and racing cars. There will be many examples to be passed round for examination.
